

Quick Set-Up Guide

Fios[®]

by Frontier[®]

Let's get started

Flip over to the back to fill in your Service Ready Date
& Equipment details before beginning installation.

1 | Internet Router Set Up

Tips

- For best Wi-Fi coverage, place your router in a central location
- If you are also connecting TV equipment, install your router first

A If you received a MoCA adapter, follow Step A (the red connections)

-OR-

B If you did NOT receive a MoCA adapter, follow Step B (the orange connections)

Plug the power cord into the electric outlet, connect the router and press the ON button

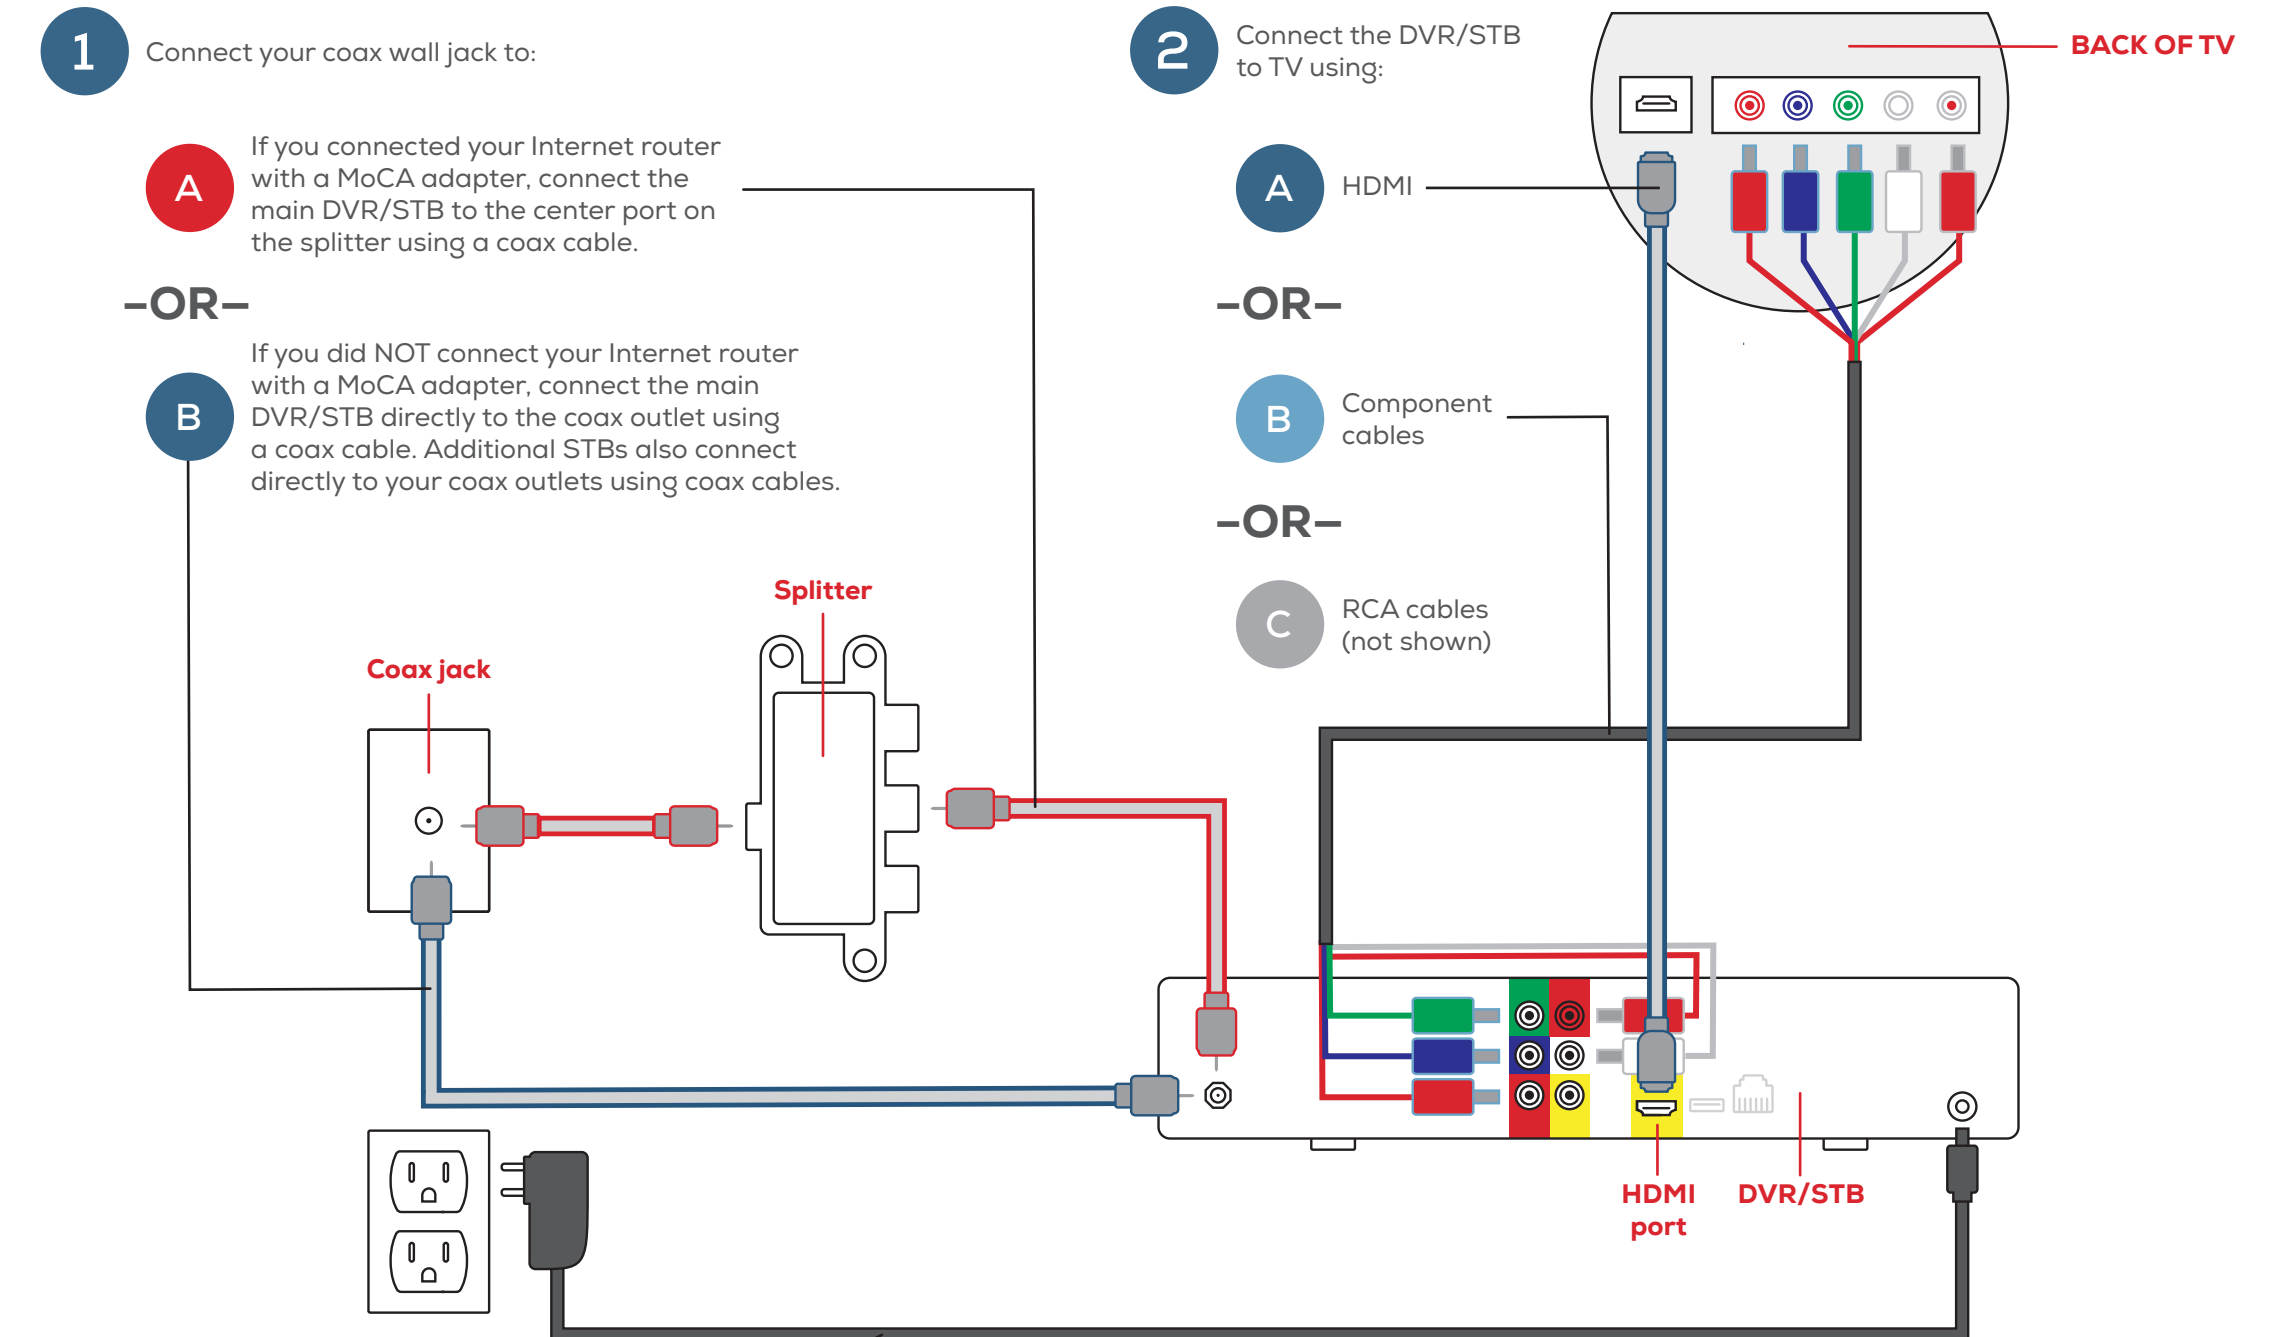

The globe light, on the front of the router, will flash, then become solid blue when you have Internet connectivity (this may take several minutes)

Connect your devices using your Wi-Fi Name and Password (see the label on the bottom of your router)

2 | TV Equipment Set Up

Tips

- Your router must be connected to the Internet before installing and activating your TV equipment
- If you received a DVR device, this box must be installed/activated before the other Set-Top Boxes (STB)

3 Connect the DVR/STB power cord to the DVR/STB and plug into the electric outlet

Press the STB power button on the remote control, turn the TV on and follow the prompts for activation

Follow the TV screen prompts for activation (A firmware will download to your device which may take up to 30 minutes)

Tips

If you are installing FiOS® Internet and your last provider was Cable or satellite, you may need to reconnect your home wiring (coax and/or Ethernet) to the Optical Network Terminal (ONT). Your ONT is often located in or outside of your garage, basement or an interior closet, may be in a protective case and appear different than the illustration. Simply open the ONT and connect your home's coax and/or Ethernet.

How Frontier® connects your home to FiOS:
