Static IP Settings:

This document covers how to manually update your static IP settings. Before starting, please have your new IP information handy.

Accessing the Router's User Interface:

There are two methods you can use to access the interface- connecting over Wi-Fi, or by using Ethernet.

If you're connecting over Wi-Fi, the sticker on the side panel of the router should provide the default connection information for the gateway's wireless network. The sticker will also provide the default Administrator login information.

The image shows a sticker with the following information:

Wi-Fi™		Default login credentials	
		Please note: password letters are all lower-case	
Wireless network name (ESSID)	FiOS-7ZTV0		
Wireless password (WPA2)	auto7780pet4503eye		
Administration URL	myfiosgateway.com		
Administrator password	big277open		
To reboot, press and hold the WPS button for 10 seconds.			
Online tutorials : www.verizon.com/quickguides			

These routers use the following IP address as the Home IP. Type this IP address into the browser's address line to access the router's Homepage.

192.168.1.1

This will display the login page:

Login

Connection has expired, please login again:
Unauthorized Access is Prohibited.

Changing the Broadband Network Connection settings:

You will need to navigate to the Broadband Connection Settings in the interface.

Here are the steps:

1. Log in.
2. Navigate to the 'My Network' tab on the top menu.

3. Navigate to the 'Network Connections' settings on the left menu.

4. Select the 'Broadband Connection (Ethernet/Coax)' option in the list.

Network Connections

Name	Status	Action
 Network (Home/Office)	Connected	
 <u>Broadband Connection (Ethernet/Coax)</u>	Cable Disconnected	

5. From the 'Properties' view, click the 'Settings' button at the bottom right.

Broadband Connection (Ethernet/Coax) Properties

Note: Only advanced technical users should use this feature.

Name:	Broadband Connection (Ethernet/Coax)
Status:	Cable Disconnected
Network:	Broadband Connection
Connection Type:	Ethernet/Coax
MAC Address:	d4:a9:28:09:af:13
IP Address Distribution:	Disabled
Coax Channel:	Cable Disconnected

Configuring the Static IP Settings:

After clicking the 'Settings' button, the screen should be expanded to include the default settings for the connection. The only property that should be changed from this screen is the 'Internet Protocol' property.

Note: The values used in this document are examples only.

Here are the steps:

1. From the dropdown for 'Internet Protocol', select 'Use the Following IP Address'.
2. Enter the IP Address that was provided by Frontier.
3. Enter the Subnet Mask that was provided by Frontier.
4. Enter the Default Gateway that was provided by Frontier.
5. From the dropdown for 'DNS Server', select 'Use the Following DNS Server Address'.
6. Enter the Primary and Secondary DNS Server Addresses that were provided by Frontier.
7. Click the 'Apply' button.

Internet Protocol: Use the Following IP Address ←

IP Address: 47 . 190 . 23 . 104 ←

Subnet Mask: 255 . 255 . 255 . 0 ←

Default Gateway: 47 . 190 . 23 . 1 ←

DNS Server: Use the following DNS Server A ←

Primary DNS Server: 74 . 40 . 74 . 40 ←

Secondary DNS Server: 74 . 40 . 74 . 41 ←

Internet Connection Firewall Enabled

(This feature provides the ability to change the default firewall setting on this interface. We highly recommend that you not change the default setting).

Apply Cancel

Confirm the changes were a success:

There are multiple places in the interface where the connection can be confirmed.

Here are the steps:

1. Navigate back to the *'Broadband Settings'* page and view the *'Summary'*.
2. Log In and click on the *'Main'* tab and view the connection status at the top left.
3. Browse the Internet.

Name:	Broadband Connection (Ethernet)
Status:	Connected
Network:	Broadband Connection
Connection Type:	Ethernet/Coax
MAC Address:	d4:a9:28:09:af:13
IP Address:	47.190.23.104
